

10G Ethernet Media Converter

10G Ethernet media converter provides copper to fiber with 10GBase-T RJ-45port and one XFP or SFP+ pluggable transceiver port.

By adopting CWDM and DWDM technology, it convert 10GBASE-T interface to WDM wavelength to achieve long distance optical signal transmission and expand fiber capacity and bandwidth.

It supports high power XFP and wavelength tunable DWDM XFP transceivers and eliminates the requirement of external programming equipment when the wavelength of the tunable transceiver can be programmed and saved to save cost.

10G media converter is available in unmanaged standalone unit, or management chassis plug-in module.
